

The LEVON group, LLC is a new and innovative environmental consultancy group based in Southern California, bringing together expertise in both the physical and social sciences to address environmental and sustainability issues and to develop transparent and inclusive management strategies.

The scope of our activities is global and our core business is organized in four major areas:

- *Environmental consultancy*
- *Innovative technology introduction*
- *Facilitation and outreach*
- *Publications and reporting*

Our Mission

1. Enable decision makers to make informed decisions on environmental strategies in a collaborative approach that is based on sound technical information, benefits the whole of society, and enhances the economic viability of business.
2. Assist organizations to better understand and internalize the needs and wants of all stakeholders through a process of facilitated dialogues provided by an unbiased, neutral party.

SERVICES WE PROVIDE IN EACH OF OUR CORE AREAS:

Environmental Consultancy

- Analyze and help develop management strategies to increase the sustainability of organizations and allow them to benefit from the “**triple bottom line**” of *economic vitality, environmental protection and social sensitivity*.
- Develop management systems to improve governance and their implementation within organizations, while using relevant metrics for tracking performance, and improving transparency.
- Provide assistance in the development of Greenhouse Gas emission inventories; analyze sources and emissions; track trends; and devise strategies to offset or mitigate potential effects.
- Assist in developing strategies to improve urban and regional air quality while fully exploring the linkages between local pollution, air toxics exposure and climate change.

Innovative Technology Introduction

- Conduct analyses of new and innovative technologies to demonstrate their impact on air quality, air toxics exposure and climate change, in order to facilitate their introduction and acceptance by funding entities and regulatory agencies.

Facilitation and outreach

- Work with companies, trade associations and governmental organizations to analyze and understand the full life cycle impact of emissions associated with fuels and other products.
- Design, organize and facilitate workshops, conferences and multi-stakeholders dialogues to discuss a broad range of environmental and sustainability issues.
- Help negotiate with governmental agencies, business organizations and other stakeholders to facilitate the introduction of new regulatory strategies and voluntary initiatives.

Publications and reporting

- Develop environmental and sustainability metrics suitable for internal tracking of companies' or organizations' performance and devise frameworks for external reporting of results.
- Work with UN departments, global institutions and other agencies to track and report on multi-lateral agreements and framework conventions and develop implementation approaches.
